Test Name	In Range	Out of Range	Reference Range	Lab
PSA, TOTAL	2.1		<4.1 ng/mL	

Values obtained with different assay methods or kits cannot be used interchangeably. If this has occurred, re-baseline testing may be necessary. This test was performed using the Roche Elecsys method.

The age/race specific ranges below identify 95% of patients with disease as abnormal (1)(2)(3) (ie, 95% sensitivity). Increased sensitivity generally leads to a higher false positive rate.
